🟢 Nimrah Platform - User Stories

1. Map & Contributions

   1.1 Add New Places or Stations

   Priority: Could have

   User Story: "As a user, I want to add new stations or places to the map, so that I can contribute to the map's development, increase my scores, and earn badges."

   Acceptance Criteria:

   After choosing the "adding a new place" option, the user is guided through a series of inputs regarding vehicle type, coordinates, fare, and operational hours.

   Upon confirmation, the station is saved in the database and rendered on the map with a custom marker.

   Users earn platform score and badges upon completing contributions.

   1.2 Save Favorite Places

   Priority: Could have

   User Story: "As a user, I want to save my favorite places, so that I can find them easier and faster later."

   Acceptance Criteria:

   Clicking the save icon stores the location coordinates and label into local storage/database.

   Saved places are accessible via the personal places view.

2. Routing & Navigation

   2.1 Fast and Economical Routing

   Priority: Must have

   User Story: "As a user, I want to find the fastest or most economical route between a start and destination point with no authentication barriers, so that I can commute efficiently."

   Acceptance Criteria:

   The system computes alternative paths using OSRM, displaying distance, estimated duration, and calculated fare costs.

Users can switch between "Fastest Time" (کمترین زمان) and "Lowest Cost" (کمترین هزینه).

2.2 Public Transport & Walking

Priority: Could have

User Story: "As a user, I want to find public transportation options and walking distances, so that I can choose alternative transit methods."

2.3 Interactive Routing Helpers

Priority: Should have

User Story: "As a user, I want to interchange start and end points easily, detect my current location with a click, or pick points directly from the map, so that I can plan routes without redundant typing."

Acceptance Criteria:

Clicking the swap button instantly reverses the origin and destination coordinates and recalculates the routes.

Selecting "current location" uses browser geolocation (GPS) to populate the starting field.

Users can select points by clicking directly onto the map via crosshair picking mode.

Clicking on any route step displays a detailed turn-by-turn instruction list (گام‌های مسیر).

3. Authentication (Register & Login)

3.1 Account Creation & Sign In

Priority: Must have

User Story: "As a user, I want to register or log into my account using my phone number, so that I can unlock community features like Hamsafar and permanent groups."

Acceptance Criteria:

Attempting to register an already-existing phone number triggers an validation error.

Successful authentication issues a secure session token allowing access to protected endpoints.

4. User Profile

4.1 View Contribution Metrics

Priority: Should have

User Story: "As a logged-in user, I want to view my score, rank, earned medals, uploaded photos, and past comments, so that I can track my contributions to the platform."

4.2 Account Management & Sharing

Priority: Must have

User Story: "As a logged-in user, I want to update my name, avatar, and role, copy my profile link, or log out from my profile menu, so that I can maintain my account."

Acceptance Criteria:

Editing and saving profile details successfully updates user data in the backend database.

Selecting the logout option clears session tokens and resets local navigation state.

5. Hamsafar (Ride-Sharing & Matching)

5.1 Real-Time & Scheduled Matching

Priority: Must have

User Story: "As a logged-in user, I want to search for travelers near my route (now or scheduled for the future) and send connection requests, so that I can share commuting costs."

Acceptance Criteria:

Users publishing a trip are matched against other users sharing similar routes and schedules.

Group capacity is strictly capped at a maximum of 4 members.

Users can inspect the profiles, ratings, and avatars of potential travel companions before connecting.

5.2 Request Lifecycle & Messaging

Priority: Must have

User Story: "As a user, I want to manage pending ride requests (accept, reject, or cancel) and access a shared chat with accepted members, so that we can coordinate our trip."

Acceptance Criteria:

Group chat becomes available only after a ride request is accepted by the receiver.

Users can leave or dissolve temporary travel groups at any time.

6. Groups (Permanent Chat & Community)

6.1 Group Management & Interaction

Priority: Must have

User Story: "As a user, I want to manage my permanent groups, search group names, share invitation links, and post messages or polls, so that I can maintain ongoing communication with regular travel partners."

Acceptance Criteria:

The first user to convert a temporary group into a permanent one becomes the group owner (admin).

Group names can be modified by authorized members, and notifications can be toggled per group.

Members can attach elements like polls using the chat action buttons.

6.2 Owner Moderation & Leaving Groups

Priority: Must have

User Story: "As a group member, I want to leave a permanent group, and as an owner, I want to remove members or delete the entire group, so that group memberships remain orderly."

Acceptance Criteria:

Any user can leave a permanent group via the options menu.

Only the designated group owner can kick members or permanently delete the entire group and its chat history.

7. Admin Panel

7.1 Secure Portal & Telemetry

Priority: Must have

User Story: "As an admin, I want to log into a separate, secure admin portal to view platform statistics (total users, active travelers, groups, and stations), so that I can monitor system health without accessing the map UI."

Acceptance Criteria:

The portal is completely isolated from the main user application.

Only accounts explicitly whitelisted with the admin role can authenticate successfully.

7.2 Content & User Moderation

Priority: Must have

User Story: "As an admin, I want to view registered users and permanent groups to delete abusive accounts or dissolve violating groups, so that the platform remains safe."

Acceptance Criteria:

Admins can view directories of users and groups and execute permanent deletions.

An admin cannot accidentally delete their own administrative account.
